King

Workers

Post - Construction Anti Termite Treatment :

prevent drilling on the pipe.

- Indoor area : Drilling, Filling and Spraying chemical on the floor near the wall, size of each hole is equal to one baht coin, and drilling area every one feet drilling might break floor tile or marble, but we will take a very good care on this section, and we will also check the piping line first to

- Drilling furniture for chemical injection.

- Drill only critical area
- Drill only place hard to see

- Spray chemical on the ceiling

- Check if ceiling can be spray
- Spray chemical to critical area

Made of Treatment :

Stage - 1 : Treatment to wall and Floor Holes of 10 -12 mm diameter 12 inches apart will be drilled along the inner junction of wall and floor of entire building. Chemical emulsion will be injected under pressure into these holes, to create invisible chemical barrier.

Stage - 2 : Treatment to termite tube and Woodwork visible mud tubes will be removed and the infested area will be treated with our chemical emulsion.

Pre-Construction Treatment for Wooden portions of the building are treated :

Further, on all floors, wood work like doors and windows, which are highly susceptible to termite attack are also protected by treatment.

Spot treatment of spraying on infested areas in the walls and ceiling is also carried out.

Pre-Construction Anti Termite Treatment :

If you are planning to build a house or develop your property for building your office, termite control is the first thing you should think of. We

use highly professional and advanced techniques for treating the termite infestation problem. Direct liquid treatments are applied to the outside, inside and also in the foundation to eliminate the termites completely. Direct injection of liquid pesticide (termiticide) to masonry walls, within the foundation walls and also areas under the concrete slabs is part of our specialized termite control treatment plan.

Five steps of Treatment :

- Side & bottom surface of the foundation.
- The backfilled soil of the built-up wall is treated.
- The top surface of consolidated earth within support walls.
- Wall & Floor junction with vertical chemical barrier.
- The earth of external perimeter of the building.
